SUMMARY

AI/ML Engineer with a B.Sc. in Artificial Intelligence (GPA: 3.97/4.00) and hands-on experience across computer vision, NLP, LLMs, and AI agents. Builds end-to-end systems spanning multimodal AI, RAG, voice AI, model fine-tuning, and on-device inference. Trained through KAUST Academy and the University of Oxford.

EDUCATION & TRAINING

Umm Al-Qura University Sep. 2021 – Jun. 2026
Bachelor of Artificial Intelligence Makkah, Saudi Arabia

- **GPA**: 3.97 / 4.00

KAUST Academy – University of Oxford Jan. 2026 – Aug. 2026
Artificial Intelligence Training Program Makkah, Saudi Arabia & Oxford, United Kingdom

- **Selection**: Chosen as one of **11 participants** for the University of Oxford track from approximately **24,000 applicants** after an **80-hour** KAUST Academy intensive in Deep Learning and Computer Vision; **6-week full-time residency** at Oxford. Certificates
- **Computer Vision (Oxford)**: Advanced study spanning Graph Machine Learning (GNNs), Generative AI, and representation learning, including JEPA, CLIP-style joint embeddings, contrastive learning, and unsupervised/self-supervised learning.
- **LLMs & NLP (Oxford)**: Progressed from TF-IDF and RNN/LSTM to Transformers, BERT, encoder-decoder, and decoder-only architectures; covered LLM pre-training, post-training, reasoning, TTS, and STT.

The Education University of Hong Kong Jul. 2025 – Aug. 2025
Exchange Student, Summer Program in Deep Learning & Computer Vision Hong Kong, China

- Completed hands-on object detection and OCR workflows covering CNNs, transfer learning, data annotation, YOLO training/inference, and evaluation with mAP and CER. Certificate
- **SmartGrader (capstone)**: Built an end-to-end handwritten exam grading system using YOLOv8 for section detection, EasyOCR + TrOCR for handwriting recognition, and an LLM for rubric-based scoring with review/edit/export functionality. GitHub

EXPERIENCE

Deep Scan Technologies | **dscan.ai** Mar. 2025 – Jun. 2025
AI Intern Riyadh, Saudi Arabia

- **Hotel Voice Assistant**: Built a voice-driven reservation agent with n8n and ElevenLabs that books, cancels, and reschedules stays, routes user intent, and updates booking data in real time.
- **Arabic Speech Data**: Assembled, cleaned, and standardized a large Arabic speech corpus from public sources for training *Nabrah*, a Saudi-dialect voice model. **Stack**: PyTorch, n8n, ElevenLabs, Whisper, GPT, Pandas, Git/GitHub.

PROJECTS

Recall-Guaranteed Similarity Search | *Oxford Research* Jun. 2026 – Aug. 2026

- Researched recall-guaranteed similarity search over a very large dataset, preserving **100% recall** at scale. Technical and dataset details are withheld under NDA.

NeoBalady+: Multi-Model AI for Smart-City Operations | *PyTorch, VLM, ConvLSTM, RAG, OSMnx* Sep. 2025 – Jun. 2026

- **Graduation Project – Vision**: Built a multimodal backend for Makkah Municipality's Balady app using a quantized Vision-Language Model to classify photo complaints, generate Arabic descriptions, detect day/night duplicates, estimate complaint priority from visual evidence, and verify repairs from before/after images.
- **Forecasting & assistants**: Added ConvLSTM hotspot forecasting over Makkah's street network, Z-Score anomaly alerts, Random Forest SLA estimation, Saudi-dialect Whisper for voice notes, and a RAG Arabic citizen assistant; integrated the system into interactive Gradio dashboards.

Saudi Dialect End-of-Utterance (EOU) Detection | *SaudiBERT, NLP, Text Classification* Jan. 2026

- Built a **text-based** end-of-utterance classifier for Saudi-dialect voice-agent transcripts; fine-tuned **SaudiBERT** on a hybrid dataset combining public data with **2,136** ALLaM-generated synthetic edge cases. Published the model, live demo, and dataset on Hugging Face.

IronID: On-Device Gym Equipment Recognition | *TFLite, MobileNetV3, Distillation* | GitHub Oct. 2025 – Jan. 2026

- Built a hybrid Android app recognizing gym equipment fully on-device, removing cloud latency and privacy risk; benchmarked MobileNetV3-Small, EfficientNet-B0 distillation, and MobileNetV3-Large, selecting the latter for the best accuracy/latency trade-off, gated by a 60% confidence threshold.
- Compressed via magnitude-based pruning and Float16 quantization, cutting model size from 11.37MB to **5.72MB** (**50% smaller**); the deployed model reached **99.02% accuracy** at **30–35ms latency**, paired with a GPT-3.5-turbo coach and shipped via GitHub Actions CI/CD.

Arabic Text Correction | *PyTorch, AraT5, POS Tagging* | GitHub Feb. 2025 – Mar. 2025

- Fine-tuned AraT5 with POS tagging on QALB-2014 for Arabic grammatical error detection and correction, achieving **81.04 F0.5**.

SKILLS

Technical: Machine Learning, Deep Learning, Computer Vision, NLP, LLMs & RAG, Vector Search & ANN Retrieval, AI Agents, Generative AI, Graph ML (GNNs), Self-Supervised & Contrastive Learning, Fine-Tuning, Model Optimization (Quantization, Pruning, Knowledge Distillation), On-Device AI, Speech (STT/TTS)
Frameworks: PyTorch, TensorFlow, TensorFlow Lite, Hugging Face Transformers, FastAPI, Scikit-Learn, OpenCV, YOLOv8, Whisper, NumPy, Pandas
Programming & Tools: Python, SQL, Java, Docker, Git/GitHub, GitHub Actions (CI/CD), Gradio, n8n
Languages: Arabic (Native), English (Fluent)
